investment, however, many organizations still find it difficult to wring more value out of their data, AI, and analytics initiatives.

What Kyndryl offers:

- A full stack of data management and transformational AI services, delivered with automated workflows and built-in intelligence, to help unlock the true value of data
- A client-first approach that crafts fit-for-purpose solutions via modular services, from defining the right data strategy to modernizing a data ecosystem by using a data fabric framework mounted on hyperscalers
- Partnerships with hyperscalers and leading data platform providers that deliver a seamless product and services experience while also enabling early adoption of new services in the data and AI space
- An augmented data and analytics console, powered by a robust partner ecosystem and supported by open source technologies, that provides a single unified console across the hybrid cloud data estate

Global Practice #3: Digital Workplace Services

Building a Modern Digital Workplace

Today's IT organizations must support the modern workforce with tools that equip employees to work from anywhere while erasing barriers of time and space in support of organizational culture.

What's required is computing, network, and software resources to empower the distributed and digital workforce while also offering support and protection of critical data to ensure that virtual teams can come together to work productively.

With the employee at its center, the new digital workplace requires a data-driven approach to seamlessly integrate applications and data, simplify workflows, and enhance employee experiences. Changes forced on organizations by the pandemic also present an opportunity to rethink the way work is done.

What Kyndryl offers:

- Global experts who put the employee at the center of the hybrid workplace, using proactive experience management and predictive support for devices and applications
- An approach that is holistic, measurable, and data-driven, seamlessly integrating digital touchpoints and simplifying workflows to improve business outcomes and address the employee journey
- Measurement and continuous improvement of the employee experience across all digital touchpoints — including procurement, devices, applications, management, and support — to help co-create an integrated, seamless employee experience that fosters employee productivity and organizational culture
